-- It is preferred that the tea or the other natural material is added to a food product in the form of powder. The incorporation of manganese due to bacteria is facilitated if the manganese source is a powder. The pulverization is conducted by extracting a natural material with water and/or water-miscible organic solvent (e.g. alcohols such as ethyl alcohol, etc.) and then with an organic solvent which is in-miscible to water (e.g. chloroform, ethyl acetate, butanol, etc.) to separate into an organic phase and an aqueous phase, recovering a dissolved solid content from the aqueous phase, followed by drying. Further, a solid content may also be recovered from a solution extracted
